EXPERIENCE

Software Engineering Intern

Cubeworks Technology Consulting and Solutions, Inc.

March 2026 – June 2026

- Architected an independent Proof of Concept (PoC) to benchmark and optimize the main system's OCR performance, resulting in a 30% accuracy increase in interpreting "unreadable" cursive medical prescriptions.
- Engineered a full-stack specialized tool using Python and React for single-page image processing, integrating Ollama LLMs to transform raw handwritten data into structured digital records.
- Optimized the AI data pipeline using Google Colab and CUDA, reducing model training time by 25% and improving the system's ability to handle high-complexity medical terminology.
- Developed a simulated industrial automation system using Factory I/O and Node-RED, integrating PostgreSQL for real-time data logging and process monitoring.

PROJECTS

Offline Learning Management System (Thesis Project) | Team Lead & QA Engineer

- Led the development of an offline LMS with core LMS functionalities, including course management, assessments, file access, user roles, and local deployment support.
- Built a LAN-based LMS that allowed students and teachers to access learning materials and assessments with zero internet dependency.

USCERT I.T.C.H. (Inventory Tracking and Checking Hub)

- Developed a Java-based inventory system with MySQL (XAMPP) that digitized manual record-keeping for USCERT, improved equipment checkout and tracking efficiency by 50% through digitized transaction records.
- Engineered a centralized database with real-time transaction logging and secure admin access, improving accountability and reducing manual tracking errors for university hardware assets.

Real Estate Price Predictor

- Developed a React application using Newton's divided-difference to automate real-time property price predictions, replacing manual calculations with high-precision polynomial extrapolation.
- Integrated Recharts for dynamic visualizations, allowing users to compare actual vs. predicted price trends with tunable controls and responsive UI design in JavaScript.

EDUCATION

University of San Carlos

Bachelor of Science in Computer Engineering

July 2026

LEADERSHIP & ORGANIZATIONAL EXPERIENCE

USC Computer Engineering Council

Council Member

2024–2025

- Assisted coordinating academic and student engagement events for the Computer Engineering department.
- Managed budget planning and expense tracking for council funds, maintaining 100% transparency and accuracy in financial documentation for all student activities.

SKILLS

- **Programming Languages:** Python, Java, PHP, C/C++, JavaScript (ES6+), SQL
- **Web Development:** React, Node.js, FastAPI, HTML5, CSS3
- **Databases & Developer Tools:** PostgreSQL, MySQL, Git/GitHub, GitLab CI/CD, Linux (WSL)
- **AI, Automation & Technical Tools:** Ollama-based LLM Integration, OCR/HTR, CUDA, Node-RED, Cisco Networking
